

GREECE SOCCER FIELD

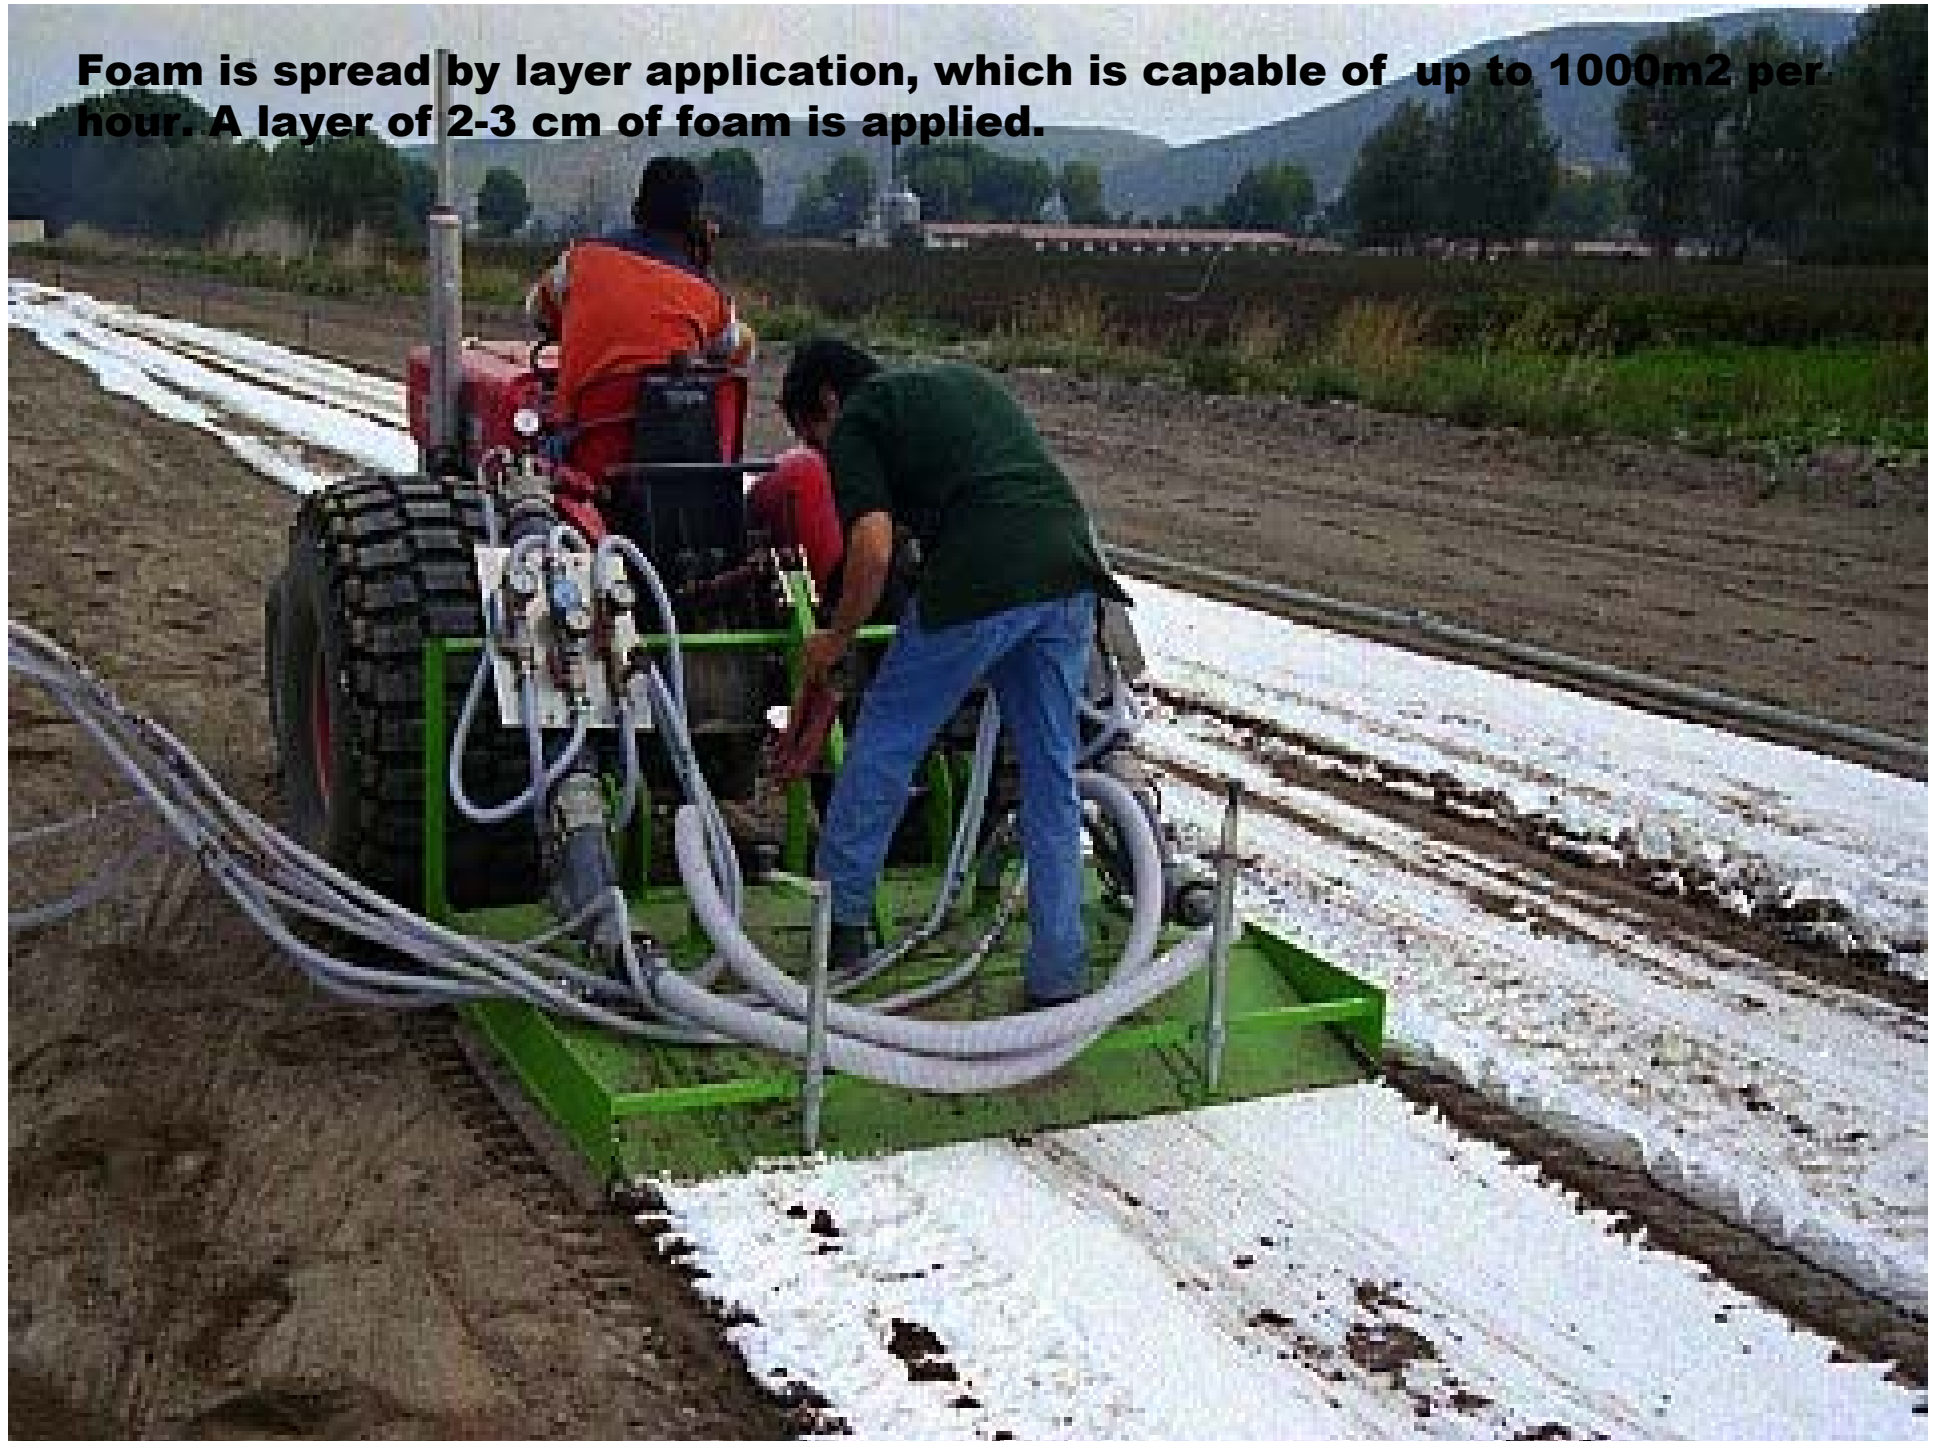

FYTOFOAM APPLICATION

BIC Corporation

75% clay loam soil

2001

Foam is spread by layer application, which is capable of up to 1000m² per hour. A layer of 2-3 cm of foam is applied.

After 24 hours the foam has dried sufficiently to allow incorporation to 15cm in the profile which equates to 15% - 20% foam by volume.

A control strip was left where foam was not applied.

Emergence of ryegrass 30 days after sowing; with Fytofoam on the left and the control strip on the right.

Soil cores taken after 30 days on the 75% clay loam soil. With foam on the right.

30 days after sowing, the reflection from the bare soil is giving the pink effect
